Describe the research base of the curriculum including references:

The AEPS developers are committed to careful study of the validity, reliability, and utility of the AEPS-3 Test and Curriculum as well as to the quality and usefulness of associated materials. A curriculum validation study was completed in four sites in Kentucky and Oregon, including one center-based early childhood program serving children ages 6 weeks to 6 years and three regional programs serving children eligible for EI/ESCSE services in home and classroom settings. Eleven early childhood educators, early interventionists, and early childhood special educators participated in a study that included 25 children ages 1 year 2 months to 5 years 6 months. Participants were required to complete an online training module and pass an interrater reliability test with a score of 80% or higher to prove competency scoring AEPS-3. They were also required to attend a 3-hour online training course on the AEPS-3 Curriculum. After using the AEPS-3 Curriculum with children in their program, participants submitted their data and joined online focus groups to discuss questions about planning, implementation, and progress monitoring with the curriculum.

Researchers met to determine congruence from the data and identify themes. First, it was found that the curriculum helped providers link assessment information collected from the AEPS-3 Test to the AEPS-3 Curriculum. Second, providers perceived that the curriculum helped them implement recommended practices for young children with and without disabilities. Specific practices they mentioned included being consistent and intentional in supporting children's development, linking assessment and instruction, embedding children's goals into ongoing routines and activities, and supporting families to implement instruction in routines and activities. Third, providers expressed that the AEPS-3 Curriculum provides support for implementing a multi-tiered system of support (MTSS) for young children with and without disabilities. Specifically, the AEPS-3 Test provides guidance about not only which skills a child needs to learn but also which tier of support the child needs to learn those skills. Providers found that they typically provided instruction at the universal tier and then built upon that tier as is recommended when implementing MTSS. Finally, providers found that it was feasible to implement the progress monitoring strategies associated with the AEPS-3 Curriculum within their programs.
